Introduction

Introduction

Maxideck is a high performance acoustic flooring solution, designed to comply with Building Regulations Part E. Ideal for conversion or newbuild projects, Maxideck is a cost effective and time efficient method of exceeding both the airborne and impact noise standards in many different constructions. Maxideck is also ideal for customers who are simply looking to upgrade the sound insulation of their own properties.

Maxideck is an extremely versatile product, and can be used in all areas. The use of a moisture resistant material on the upper face ensures the product can be installed in both kitchens and bathrooms.

Benefits

- ✓ High levels of airborne & impact insulation
- ✓ Can comply with Part E
- ✓ Great for refurb and conversion projects
- ✓ Suitable for Newbuild
- ✓ Easy to install
- ✓ Minimum increase in floor height - only 28mm thick
- ✓ Available through SRS' nationwide distributors
- ✓ Can be used in Kitchens & Bathrooms

Installation

***NOTE:** SRS Ltd advise that for best results Maxideck is installed above a ceiling comprising two layers of plasterboard on resilient bars, with 100mm dense mineral fibre between the joists. The direct fix result is given as information only, for those people who already have a ceiling in place. If you must install Maxideck above an existing ceiling, it may need upgrading. SRS suggest 2 layers of plasterboard, with a minimum mass per square metre of 20kg/m², and 100mm of dense mineral fibre in the cavity, as a minimum requirement.*

The existing floor surface should be dry and free from debris before installing the Maxideck. If the existing floorboards have gaps between them, they must be filled with a flexible sealant. The Maxideck is fitted in a brick bond pattern, with the felt facing down.

Where the Maxideck meets the skirting boards at the perimeter walls, the overlap on the top board of the Maxideck should be removed. In order to isolate the boards from the skirting, and allow for any expansion that might occur, the self adhesive 25mm 5/26 Maxideck Edging Strip should be applied directly to the trimmed edge of the board. This enables the installer to locate the boards easily, leaving a 10mm expansion gap, which the Soundseal will expand to fill. Please note that the rate of expansion varies

Maxideck Installation

depending on site conditions - a period of 24hrs should be allowed for full expansion.

If fitting skirting boards after the Maxideck has been installed, you must use the wider 32mm 5/26 Maxideck Edging Strip on the boards that meet the perimeter walls. The excess Edging Strip expands over the top of the Maxideck and provides the installer with a resilient base to sit the skirting on.

Once fully installed, the Maxideck can be treated as a standard timber floor finish, however, please refer to manufacturers instructions before installing any decorative floor finish.

All Maxideck joints are to be glued with SRS Gripfix. Joints are then screw fixed using 20 x 3.5mm, countersinking screws. Two

screws are recommended along each long edge of the individual boards, 100mm either side of the joint in the previous row. The SRS Gripfix will achieve full bond strength after 24 hours cure. It is essential that screw fixings do not penetrate the felt layer – no screws longer than 20mm should be used.

Should you need to cut a hole in the Maxideck to accommodate any pipework, you should use the correct sized hole saw to remove the section of Maxideck. Another section of Maxideck, from the hole to the edge of the board, should be then be removed using a hand saw or jigsaw to allow the service/pipe to be located in the board – this piece should be retained. Once the pipe is in place, the retained section can be glued back into position using SRS Gripfix. SRS Acoustic sealant can be used to fill any gap between the pipe and the Maxideck.

Acoustic Data

Acoustic Performance - Directly Fixed Ceiling

When tested to BS EN ISO 140 Part 4 and rated to BS EN ISO 717 Parts 1&7 the test results were:

Maxideck installed above a double boarded ceiling			
	$D_{nT\omega}$	$D_{nT\omega} + C_{tr}$	$L_{nT\omega}$
	50dB	44dB	61dB

Tests carried out by Soundtesting.co.uk on 13th July 2007:
Airborne test number: 1402-1, Impact test number: 1402-2

Acoustic Performance - Resiliently Fixed Ceiling

When tested to BS EN ISO 140 Part 4 and rated to BS EN ISO 717 Parts 1&7 the test results were:

Maxideck installed above a double boarded ceiling on resilient bars			
	$D_{nT\omega}$	$D_{nT\omega} + C_{tr}$	$L_{nT\omega}$
	60dB	52dB	52dB

Tests carried out by Noise Control Services on 19th April 2007.
Test Reference No. NCS/050705/8

Storage: Maxideck must be laid flat and kept dry. Maxideck should only be stored on site if the building has been sealed and is completely dry.

Cutting: Maxideck is best cut using a circular saw with dust extraction fitted, however, it can also be cut using a handsaw or a jigsaw with a heavy duty blade fitted for small areas.

Distributor map and contact details on reverse of brochure.

Maxideck Dimensions: Size: 1200 x 600mm (Nominal), Thickness: 28mm, Weight: 27 kg/m²

Maxideck Accessories: SRS Gripfix = 310ml Tube
SRS Acoustic Sealant = 900ml Tube
25mm Wide Maxideck Edging Strip 5/26 (For use if skirting already installed)
32mm Wide Maxideck Edging Strip 5/26 (For use if installing skirting on to Maxideck)

Site conditions and installation standards vary. SRS cannot take responsibility for the performance of any installed system of which SRS products are only a part, or that have been installed incorrectly. Prior to installation, it is necessary to identify and eliminate possible flanking paths that may compromise the acoustic performance of any SRS product.
